StoryCast: Growing Futures

Project Report

1. Introduction

StoryCast: Growing Futures is a responsive, accessible website which provides information about the opportunities in agricultural technology and youth development in Rwanda.

Its featured story follows Eric, a young man who realizes that agriculture has many roles including crop planning, packaging, marketing and agribusiness.

2. Website Structure

The project includes three pages:

1. **Home:** Introduces the website and features the main story.
2. **Story Detail:** Presents the narrative with audio and video content.
3. **Our Mission:** Explains the project's purpose and accessibility goals.

3. Technologies and Design

The website uses HTML5, Sass, and CSS. The Sass partials help organize colours, typography, and spacing. CSS Grid, Flexbox, responsive breakpoints, and a container query help the layout adapt to different screen sizes for diffrnt usrs.

The visual design uses green, cream, and ochre tones to create a consistent identity.

4. Audio and Video Content

Audio and Video narration: *From Uncertainty to Opportunity: Growing a Future in Agriculture.*

The narration explores Eric's confusion after school, his introduction to modern agriculture, and realization that agriculture offers him several possibilities, which come with technology, training and entrepreneurship.

Planned media files:

- `assets/media/story-1.mp3`
- `assets/media/story-1.mp4`
- `assets/transcripts/story-1.vtt`

5. Accessibility

The project aims to support WCAG 2.2 Level AA through the use of semantic HTML, keyboard-friendly navigation, focus state visibility, readable text, alternative text for images, and subtitles or transcripts of media.

6. Testing and Limitations

The design has been tested during the development process. But final testing should confirm:

- Responsiveness on mobile and desktop.
- Keyboard navigation
- Focus visibility.
- Colour contrast and image alternative text.
- Working audio, video, and synchronized captions.
- Both links and navigation work.

7. Conclusion

StoryCast demonstrates that an insignificant website is capable of put together storytelling, flexible design, and accessibility in the process of searching for various job alternatives in the area of agriculture. Further testing and completion of the media files will help ensure that the final product meets its objectives.
