StoryCast: Growing Futures

Research and Planning Document

1. Project Overview

StoryCast: Growing Futures is an easy-to-use, interactive three-page website about agriculture, technology, and skills development in Rwanda.

The website features a fictional story about Eric, a young man who finds ways to participate in modern agriculture.

2. Target Audience and Objectives

Target audience: Youth in Rwanda, students, aspiring entrepreneurs, and people interested in agriculture and technology.

Objectives:

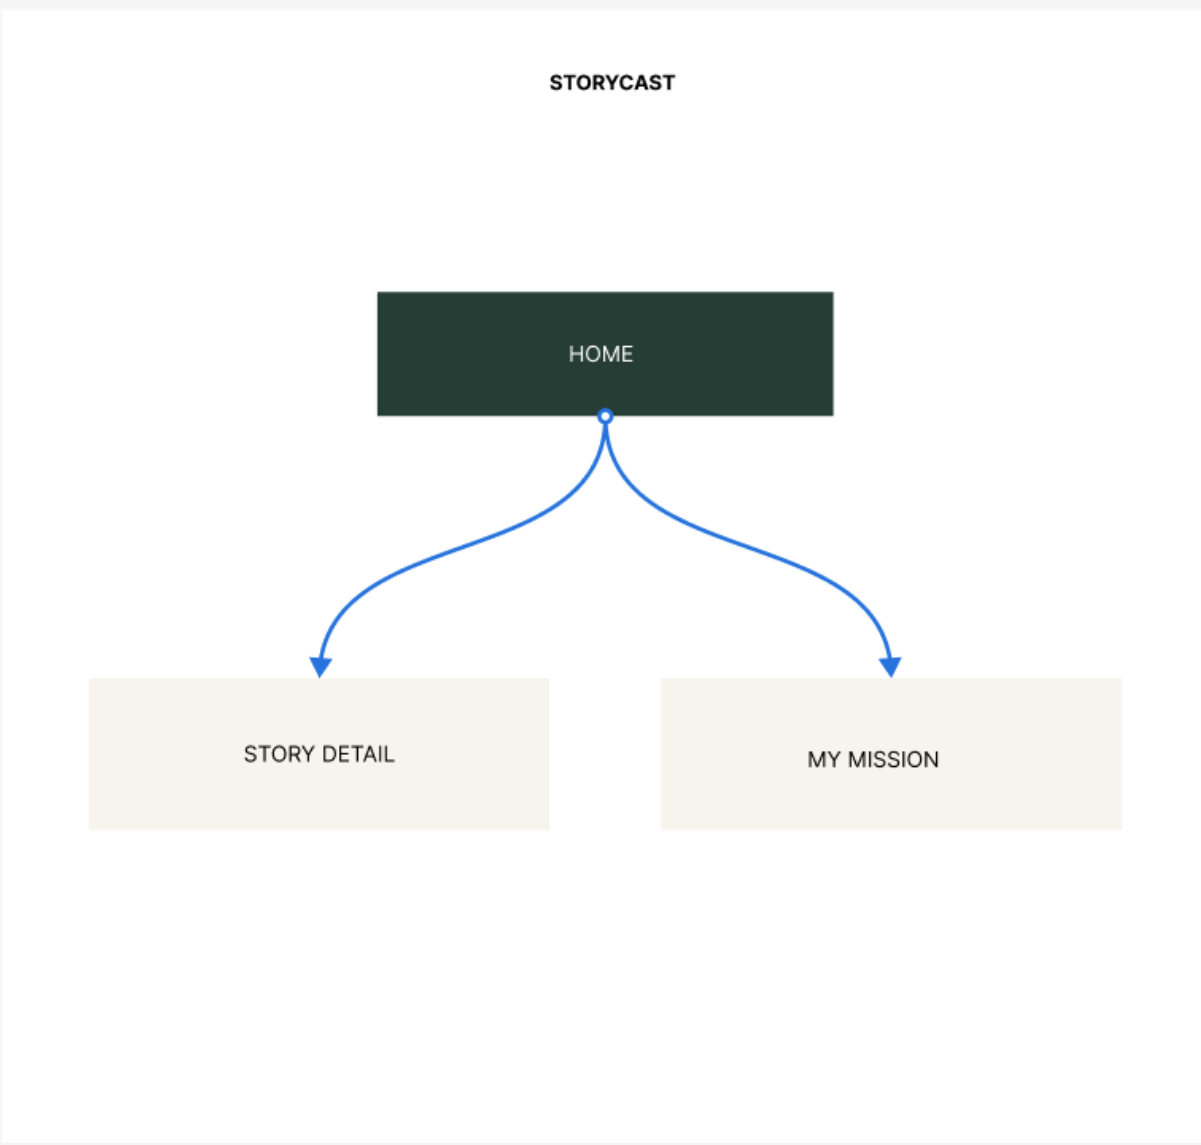

- Show that agriculture offers many career and business opportunities.
- Explain how technology and practical skills help agricultural activities.
- Create an accessible website that works across different screen sizes.
- Provide an interesting story through text, audio, and video.

3. Site Structure

The website contains three pages:

- **Home (`index.html`):** Introduces StoryCast and provides details about the story presented.
- **Story Detail (`story/story-1.html`):** Shows the story of Eric along with the audio and video material.
- **Our Mission (`about.html`):** Explains the project's purpose and accessibility of the website.

4. Wireframes

- Wireframes: Wireframe, Story Detail, About/Access

These links should point to the actual design files or shared prototypes.

5. Technologies

The website uses semantic HTML5, Sass, and CSS. Sass is organized into colour, typography, and spacing partials. CSS Grid and Flexbox support the layout, while a container query adjusts story cards to their available space.

6. Accessibility

The website follows the WCAG 2.2 Level AA principles. Features that were planned include semantic page structure, keyboard navigation, visible focus indicators, meaningful image descriptions, sufficient colour contrast, and captions or transcripts for media.

7. Media Plan

The story is narrated in writing, audio, and video. The video should include synchronized captions, and the audio should have a text transcript.

8. Conclusion

StoryCast combines storytelling, agriculture, and technology to encourage young people to explore new opportunities. The final website will be checked for responsiveness, accessibility, working links, and media functionality before submission.
